

How to browse VectorClip3D.com?

Unleash your Router's 3D Capabilities

With such a vast library of 3D models, VectorClip3D.com may look difficult to navigate in. However objects are organized by categories and easily importable and modifiable in ArtClip3D.

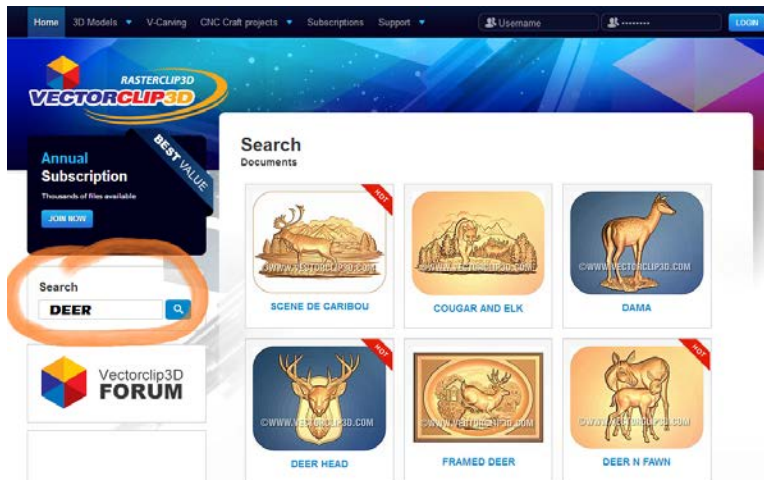

The 2006-2012 full catalog link is located to this address:
<http://www.vectorclip3d.com/images/accueil/catalog.pdf>

Easily you can find your 3D model and download it within a minute.

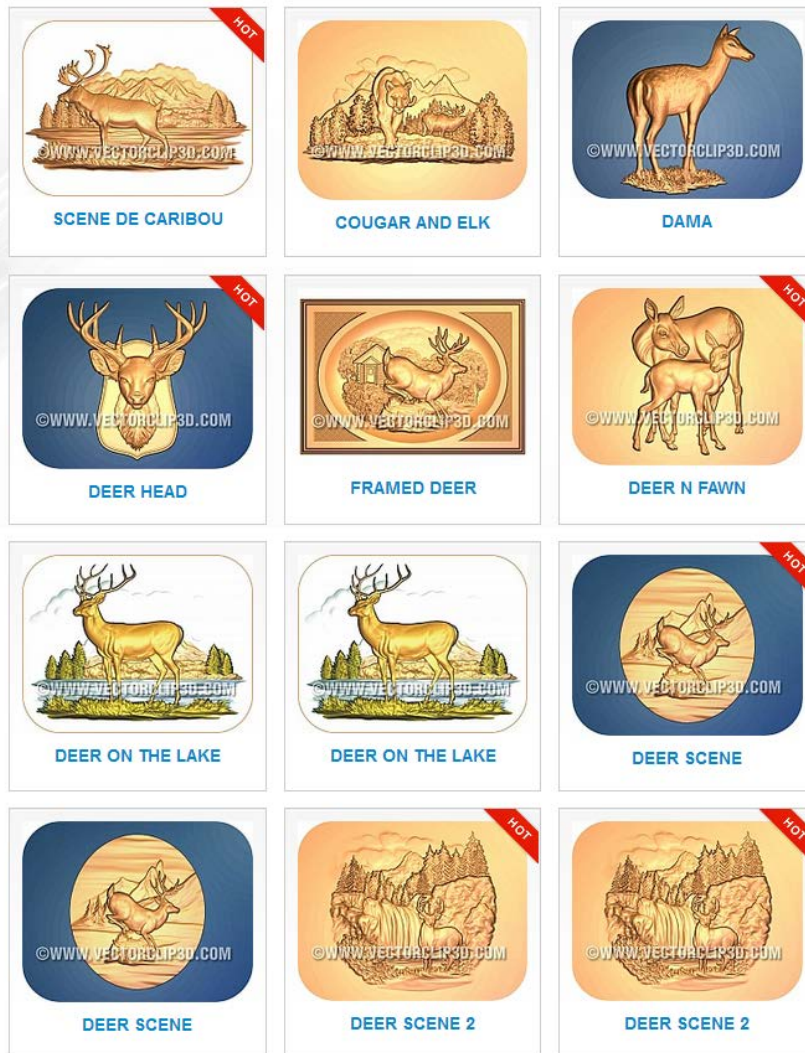

Here is how:

Let's imagine we are interested in a DEER, for instance the 3rd starting from the top left in the PDF file seems pretty cool. After having logged in on the vectorclip3d website you can send a request in the following SEARCH field:

Automatically, the website sends back a list where the word "DEER" is detected.

Search Documents

Then by clicking on the 3D model desired, you can then download it and keep it on your computer, it is yours (see also Tutorial #1: How to create your own 3D library).
